Summary

Software Development Engineer with 1+ years of experience building Python-based data processing pipelines and Node.js backend applications. Processed 265K+ XBRL filings with a reported 98.6% success rate and developed real-time applications using WebSockets. Proficient in Python, C++, SQL, and backend engineering, with hands-on experience in database systems, authentication, and application reliability.

Technical Skills

Languages: Python, C++, JavaScript, TypeScript, SQL
Core CS: Data Structures & Algorithms, OOP, DBMS, Computer Networks
Backend: Node.js, Express.js, REST APIs, WebSockets, Socket.IO, JWT, OAuth 2.0
Databases: PostgreSQL, MongoDB, Prisma ORM
Tools: Git, GitHub, Puppeteer, Vercel, Render

Experience

Associate Software Engineer Aug 2025 – Present
EY GDS *Kolkata, India*

- Developed an end-to-end **Python data processing pipeline** covering download, parsing, validation, and database ingestion of XBRL financial filings across base and extension taxonomies for IFRS- and US-GAAP-based reporting formats.
- Processed **265K+ filings** across two national registries, extracting 12–14 financial fields per filing with a reported **98.6% success rate** (261,663 successful filings).
- Investigated approximately **3.7K failed filings**, identifying recurring data-quality issues involving invalid taxonomy files and malformed date formats.
- Implemented **SQL-based validation checks** to ensure consistency and accuracy of extracted financial data before database ingestion.
- Collaborated with analysts to translate taxonomy-specific financial reporting requirements into parsing and validation rules.

Freelance Web Developer Jan 2025 – Jun 2025
Self-employed *Remote*

- Delivered **3 client websites** using React, Tailwind CSS, Node.js, and MongoDB, managing the development lifecycle from requirements gathering through implementation and deployment.
- Developed a content-managed website for a construction company, enabling easier content updates and website management.

Projects

WhisprLive | *React, Node.js, Express.js, PostgreSQL, Socket.IO* Live Demo

- Built a **real-time anonymous Q&A platform** supporting live and scheduled sessions, enabling audience interaction without requiring user accounts; used in live events with **200 concurrent participants** and approximately **100 signups**.
- Implemented **room-based Socket.IO communication** to synchronize questions, upvotes, and answer statuses between participants and hosts.
- Developed session lifecycle management, including scheduling, automatic expiration, session history, and question transcript export.
- Implemented **JWT authentication and Google OAuth 2.0**, server-side Razorpay payment verification, room-based plan restrictions, API rate limiting, and in-memory caching.

Superset Placement Automation Tool | *Node.js, Puppeteer* GitHub

- Developed a **Puppeteer-based browser automation tool** to navigate a placement portal, retrieve job listings, and automate repetitive application workflows.
- Implemented profile-based eligibility checks to filter relevant job postings and automate form interactions; used during personal placement activities to submit approximately 7–8 applications.

Education

Kalinga Institute of Industrial Technology Bhubaneswar, Odisha
B.Tech in Computer Science and Engineering – CGPA: 7.98/10 *2021 – 2025*

Narayana Junior College Tirupati, Andhra Pradesh
Higher Secondary (Class XI–XII) – 93.6% *2019 – 2021*

Narayana High School Madanapalle, Andhra Pradesh
Secondary (Class X) – 10 CGPA *2019*
